## INTRODUCTION

Thank you for selecting the Martin CX-2. The CX-2 is an automated profile spotlight designed for a 250 watt halogen source. It provides separate color and gobo/effect wheels, continuous electronic dimming, adjustable focus, strobe effects, and multiple control options.

## CX-2 SAFETY INFORMATION

## Warning!

This product is for professional use only. It is not for household use.

This product presents risks of lethal or severe injury due to fire and heat, electric shock, and falls. Read this manual before powering or installing the fixture, follow the safety precautions listed below and observe all warnings in this manual and printed on the fixture. If you have questions about how to operate the fixture safely, please contact your Martin dealer or call the Martin 24-hour service hotline at +45 70200201.

## To protect yourself and others from electric shock

- Disconnect the fixture from AC power before removing or installing the lamp, fuses, or any part, and when not in use.
- Always ground (earth) the fixture electrically.
- Use only a source of AC power that complies with local building and electrical codes and has both overload and ground-fault protection.
- Do not expose the fixture to rain or moisture.
- Refer any service operation not described in this manual to a qualified technician.
- Never operate the fixture with missing or damaged lenses and/or covers.

## To protect yourself and others from burns and fire

- Never attempt to bypass the thermostatic switch or fuses. Always replace defective fuses with ones of the specified type and rating.
- Keep all combustible materials (for example fabric, wood, paper) at least 0.1 meters (4 inches) away from the fixture. Keep flammable materials well away from the fixture.
- Replace the lamp if it becomes defective or worn out. When replacing the lamp, allow the fixture to cool for at least 5 minutes before opening the fixture or removing the lamp. Protect your hands and eyes with gloves and safety glasses.
- Do not illuminate surfaces within 0.3 meters ( 12 inches) of the fixture.
- Provide a minimum clearance of 0.1 meters ( 4 inches) around fans and air vents.
- Never place filters or other materials over the lens.
- The exterior of the fixture can reach temperatures up to $65^{\circ} \mathrm{C}\left(149^{\circ} \mathrm{F}\right)$. Allow the fixture to cool for at least 5 minutes before handling.
- Do not modify the fixture or install other than genuine Martin parts.
- Do not operate the fixture if the ambient temperature ( Ta ) exceeds $40^{\circ} \mathrm{C}\left(104^{\circ} \mathrm{F}\right)$.

## To protect yourself and others from injury due to falls

- When suspending the fixture above ground level, verify that the structure can hold at least 10 times the weight of all installed devices.
- Verify that all external covers and rigging hardware are securely fastened and use an approved means of secondary attachment such as a safety cable.
- Block access below the work area whenever installing or removing the fixture.

## UNPACKING

The packing material is carefully designed to protect the fixture during shipment - always use it to transport the fixture.

The CX-2 comes with:

- halogen lamp (installed)
- 3-meter, 3-wire IEC power cable
- user manual

## LAMP

The CX-2 comes from the factory with a Philips 500 hour lamp installed. This a 24 V , 250 W ELC halogen lamp. A high-output 50 hour lamp from Osram is also available. Installing any other lamp may damage the fixture!

Allow the lamp to cool for at least 5 minutes before packing and moving the fixture. To avoid possible damage, remove the lamp when shipping the fixture.

## To replace the lamp

Warning! Always disconnect the fixture from AC power and allow the fixture to cool for 5 minutes before installing a new lamp.

1 Disconnect the fixture from AC power. If replacing a hot lamp, allow it to cool for 5 minutes before removing the cover. The lamp cools faster with the cover in place.

2 Release the 4 cover locks by
 turning them a quarter-turn counterclockwise. Lift the cover straight off.

3 To remove the lamp, grasp it by the reflector and pull it out of the holder. Pull the socket straight back off the metal pins. Do not pull the wires.

4 Push the socket fully onto the pins of the new lamp.
5 Gently push the lamp into the holder until it snaps into place.
6 Replace the top cover. To lock the 4 cover locks, turn them a quarter to a half turn clockwise until you feel them click. Do not overtighten.

## AC POWER CONNECTION

Warning! For protection from dangerous electric shock, the fixture must be grounded (earthed). The AC mains supply shall have overload and ground-fault protection.

Important! Check voltage setting before applying power. Do not connect the CX-2 to an electrical dimmer system: doing so can damage the electronics.

Before use verify that the fixture's power supply is correctly tapped for the local AC voltage. The default voltage setting is printed on the serial number label near the AC input. The "EU" version may be set to 230 or 245 V AC and the "US" version may be set to 110 or 120 V AC . Use the setting that is closest to the local supply voltage.

## To change the voltage setting

1 Disconnect the fixture from AC power. Release the 4 cover locks by turning them a quarter-turn counterclockwise. Lift the cover straight off.

2 Locate and disconnect plug PL124 on the back edge of the printed circuit board. It has red, yellow, and blue wires.

3 To select 230 V AC (EU version) or 110 V AC (US version), flip and move the plug up so that the red wire connects to the top pin.

4 To select 245 V AC (EU version) or 120 V AC (US version), flip and move the plug down so that the red wire connects to the bottom pin.

5 Replace the top cover before applying power.

## To install a plug on the mains lead

The fixture's mains lead must be fitted with a grounding-type cord cap that fits your power distribution cable or outlet. Consult a qualified electrician if you have any doubts about proper installation.

## Important! Verify that the feed cables are undamaged and rated for the

 current requirements of all connected devices before use.- Following the cord cap manufacturer's instructions, connect the yellow and green wire to ground (earth), the brown wire to live, and the blue wire to neutral. The table below shows some pin identification schemes.

| Wire | Pin | Marking | Screw color |
| :---: | :---: | :---: | :---: |
| brown | live | "L" | yellow or brass |
| blue | neutral | "N" | silver |
| yellow/green | ground | $\perp \perp$ | green |

## INSTALLATION

The CX-2 can be fastened directly to a suitable surface or to a rigging clamp by means of its adjustable mounting bracket.

Do not lay the fixture flat on its mounting bracket arms or position it so that there is less than 10 cm (4 in.) clearance around the fan and air vents.

For maximum lamp life, do not place the fixture directly on or beside a speaker cabinet or other source of strong vibrations.

## To rig the CX-2

Warning! Always use a secure means of secondary attachment. Block access below the work area before proceeding.

1 Verify that the clamp (not included) is undamaged and can bear at least 10 times the fixture's weight. Bolt the clamp securely to the bracket with a grade 8.8 (minimum) M12 bolt and lock nut, or as recommended by the clamp manufacturer, through the 13 mm hole in the center of the mounting bracket.

2 If permanently installing the fixture, verify that the hardware (not included) and mounting surface can bear at least 10 times the fixture's weight. The four 6.2 mm holes and/or the 13 mm hole in the mounting bracket may be used.

3 Verify that the structure can support at least 10 times the weight of all installed fixtures, clamps, cables, auxiliary equipment, etc.

4 Working from a stable platform, clamp or fasten the fixture to the structure.
5 Install a safety cable that can hold at least 10 times the weight of the fixture through/over the support and through a hole in one of the aluminum arms.

6 Loosen the swivel locks and tilt the fixture to the desired angle. Turn the swivel locks clockwise to tighten. If a swivel lock does not tighten fully, pull the handle out, turn it counterclockwise, and retighten. Repeat as necessary.

7 Verify that the fixture is located at least 0.3 meters ( 12 in .) away from the surface to be illuminated and at least 0.1 meters ( 4 in .) from any combustible materials. Verify that the clearance around the fan and air vents is at least 0.1 meters (4 in.). Verify that there are no flammable materials nearby.

## Data connection

A reliable data connection begins with the right cable. For best results, use cable specifically designed for RS-485 applications, available from your Martin dealer.

## CONNECTIONS

The data sockets are wired with pin 1 to ground, pin 2 to signal - (cold), and pin 3 to signal + (hot) for compatibility with DMX devices. One or more adaptor cables as shown below may be required for connnection to the controller or other lights.

| 5-pin to 3-pin <br> Adaptor |  |
| :---: | :---: |
| Male Female |  |
| $1-1$ |  |
| $2-3$ |  |
| $3-2$ |  |
| 4 |  |
| 5 |  |
| P/N 11820005 |  |

| 3-pin to 5-pin <br> Adaptor |
| :---: | :---: |
| Male Female |
| $1-1$ |
| $2-3$ |
| $3-4$ |
| 5 |
| P/N 11820004 |

| 3-pin to 3-pin <br> Phase-Reversing <br> Adaptor | Male <br> Termination Plug |
| :---: | :---: |
| Male Female | Male XLR |
| 1 | 1 |
| 2 | 2 |
| 3 | 2 |
|  | $3 \xi 120$ |
| P/N 11820006 |  |

## To connect the data link

1 Connect a cable to the controller's data output. If the output socket has a 5 pins, use a 5-pin male to 3-pin female adaptor. Lead the cable to the first fixture and plug it into the data input.

2 Connect the output of the fixture closest to the controller to the input of the next fixture. If connecting to a fixture with reversed-polarity (pin 3 cold), insert a phase-reversing cable between the two fixtures. Continue connecting fixtures output to input. Up to 32 devices may be connected on a serial link.

3 Terminate the link by inserting a male termination plug ( $\mathrm{P} / \mathrm{N} 91613017$ ) into the data output of the last fixture. A termination plug is simply an XLR connector with a 120 ohm, 0.25 W resistor soldered across pins 2 and 3.

## Stand-alone operation

The CX-2 may be operated without a controller in stand-alone mode. It may be operated as a single unit or together with other CX-2s in "master/slave" configuration.

Several options are available to modify stand-alone operation. These options are selected using the DIP-switch as described below.

## Important! The CX-2 transmits a signal when DIP-switch pins 2 and 10 are set to ON. To avoid damage to the electronics, connect no more than 1 transmitting device (master or controller) to the data link.

## SINGLE UNIT OPERATION

The fixture defaults to stand-alone mode with music trigger whenever power is applied and there is no control signal. Options for trigger type, change speed, and lamp intensity may be selected as described under "Stand-alone settings".

## MASTER / SLAVE OPERATION

Multiple CX-2s can be connected together, without a controller, for synchronized "master/slave" operation in which the slaves mimic the behavior of the master, which may be any one of the connected fixtures.

## To connect units for master / slave operation

1 Connect the output of one CX-2 to the input of the next CX-2.
2 Connect additional CX-2s output to input. Up to 32 may be connected.
3 Terminate the link on both ends by inserting a female termination plug ( $\mathrm{P} / \mathrm{N}$ 91613018) into the data input of the first fixture and a male termination plug into the data output of the last fixture. The female terminator may not be required if the first fixture is the master.

To set the master
Important! Set only 1 fixture as master (DIP-switch pin 2 and 10 ON).
1 Set DIP-switch pins 2 and 10 to ON.
2 Set DIP-switch pins 3, 5, 6, 7, 8, 9, and 11 to OFF.

3 Select options with DIP-switch pins 1, 4, and 12.

## To set a slave

1 Set DIP-switch 10 to ON.
2 Set pins 1, 2, 3, 4, 5 and 11 to OFF.

3 Select options with DIP-switch pins 6, 7, 8, 9, and 12.

## STAND-ALONE SETTINGS

DIP-switch pins 1-9 enable stand-alone options only when pin 10 is ON. When pin 10 is off, the DIP-switch selects a DMX address. Pin 11 must be OFF for stand-alone operation.

Pin 12 selects lamp power and works in all modes. Set it to ON for reduced lamp voltage and longer lamp life; set it to OFF for full intensity.

The DIP-switch 10 setting takes effect only after the fixture has been turned off and on.

| Fixture | Option | Setting ( $0=0 \mathrm{FF}, 1=0 \mathrm{~N}$ ) |  |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 |
| single or master | auto trigger | 0 | 1 | 0 |  |  | 0 |  |  |  | 1 | 0 |
|  | music trigger | 1 | 1 | 0 |  |  | 0 |  |  |  |  |  |
|  | slow change |  | 1 | 0 | 1 |  | 0 |  |  |  |  |  |
| slave | random color | 0 |  |  |  |  | 1 |  |  |  |  |  |
|  | random gobo |  |  | 0 |  |  |  | 1 |  |  |  |  |
|  | inverted color |  |  | 0 |  |  |  |  | 1 |  |  |  |
|  | inverted gobo |  |  | 0 |  |  |  |  |  | 1 |  |  |

## MC-1 OPERATION

CX-2s with CPU firmware v 1.2 or higher are fully compatible with the Martin MC-1 Controller. See the MC-1 user manual for additional information.

## MC-1 SETTINGS

DIP-switch pin 10 must be set to OFF to enable MC-1 mode operation. Changes to the setting take effect after the fixture has been turned off and on.

DIP-switch pins 6, 7, 8 , and 9 select several control options that can be combined to achieve powerful effects quickly and easily.

Pin 12 selects lamp power and works in all modes. Set it to ON for reduced lamp voltage and longer lamp life; set it to OFF for full intensity.

| Option | Setting ( $0=0 \mathrm{FF}, 1=0 \mathrm{~N}$ ) |  |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 |
| random color |  |  |  |  |  | 1 |  |  |  | 0 |  |
| random gobo |  |  |  |  |  |  | 1 |  |  | 0 |  |
| inverted color |  |  |  |  |  |  |  | 1 |  | 0 |  |
| inverted gobo |  |  |  |  |  |  |  |  | 1 | 0 |  |

## DMX OPERATION

This section describes how to select the DMX operation mode and address using the DIP-switch and briefly describes the programmable control options.

## DMX MODES

The CX-2 has 2 DMX modes to choose from: a 1-channel mode that provides control of the built-in stand-alone features, and a 4-channel mode that provides full control of all effects.

## To select DMX mode

1 Disconnect the fixture from power. Set DIP-switch pin 10 to OFF.
2 To select 1-channel DMX mode, set DIP-switch pin 11 to ON.
3 To select 4-channel DMX mode, set DIP-switch pin 11 to OFF.

## DMX ADDRESS

DIP-switch pins 1-9 are used to set the control address. The address, also known as the start channel, is the first channel used to receive instructions from the controller.

For independent control, each fixture must be assigned its own address and nonoverlapping control channels. Two CX-2s may share the same address only if they are to respond identically: they will receive the same instructions and individual control will not be possible.

## To set the DMX address

1 Select an address for the fixture on your controller. Look up the DIP-switch setting for the address in the table below.

2 Disconnect the fixture from power.
3 Set pins 1 through 9 to the ON (1) or OFF (0) position as listed in the table.

Find the address in the table. Read the settings for pins 1-5 to the left and read the settings for pins 6-9 above the address. "0" means OFF and " 1 " means ON.
Pin 10 is always OFF for DMX operation.

| DIP-Switch Setting |  |  |  |  | \#9 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & 0=O F F \\ & 1=0 N \end{aligned}$ |  |  |  |  | \#8 | 0 | 0 | - | 0 | 1 | 1 | 1 | 1 | 0 | 0 | 0 | 0 | 1 | 1 | 1 | 1 |
|  |  |  |  |  | \#7 | 0 | 0 | 1 | 1 | 0 | 0 | 1 | 1 | 0 | 0 | 1 | 1 | 0 | 0 | 1 | 1 |
|  |  |  |  |  | \#6 | 0 | 1 | 0 | 1 | 0 | 1 | 0 | 1 | 0 | 1 | 0 | 1 | 0 | 1 | 0 | 1 |
| \#1 | \#2 | \#3 | \#4 | \#5 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
| 0 | 0 | 0 | 0 | 0 |  |  | 32 | 64 | 96 | 128 | 160 | 192 | 224 | 256 | 288 | 320 | 352 | 384 | 416 | 48 | 480 |
| 1 | 0 | 0 | 0 | 0 |  | 1 | 33 | 65 | 97 | 129 | 161 | 193 | 225 | 257 | 289 | 321 | 353 | 385 | 417 | 449 | 481 |
| 0 | 1 | 0 | 0 | 0 |  | 2 | 34 | 66 | 98 | 130 | 162 | 194 | 226 | 258 | 290 | 322 | 354 | 386 | 418 | 450 | 482 |
| 1 | 1 | 0 | 0 | 0 |  | 3 | 35 | 67 | 99 | 131 | 163 | 195 | 227 | 259 | 291 | 323 | 355 | 387 | 419 | 451 | 483 |
| 0 | 0 | 1 | 0 | 0 |  | 4 | 36 | 68 | 100 | 132 | 164 | 196 | 228 | 260 | 292 | 324 | 356 | 388 | 420 | 452 | 484 |

## 1-CHANNEL DMX OPERATION

The functions shown in the following table are available in 1-channel mode. When a "stand-alone" function is selected, the fixture steps through a routine using a built-in microphone to trigger the action to the beat of the music. Note that multiple fixtures cannot be synchronized in this mode.

| DMX value | Percent | Function |
| :---: | :---: | :--- |
| $0-10$ | $0-4$ | Blackout (light off) |
| $11-20$ | $5-7$ | Open (light on) |
| $21-80$ | $8-31$ | Strobe |
| $81-115$ | $32-45$ | Stand-alone with slow music trigger |
| $116-140$ | $46-55$ | Stand-alone with medium music trigger |
| $141-175$ | $56-68$ | Stand-alone with fast music trigger |
| $176-210$ | $69-82$ | Stand-alone with random music trigger |
| $211-255$ | $83-100$ | Manual trigger area, crossover at 240 (94\%) |

## FULL DMX OPERATION

See also the DMX protocol on page 20.
Channel 1 controls the light intensity and the strobe rate. It also allows you to execute a "stand-alone" program with random color and gobo change using automatic or music trigger.

All effect wheels are reset to their home position when the fixture is powered up; they can also be reset from the controller by sending a reset command on channel 1.

Channel 2 controls the position of the color wheel. When set to 100 percent, the wheel moves to random positions using the trigger selected on channel 1 .

Channel 3 controls the position of the gobo wheel. When set to 100 percent, the wheel moves to random positions using the trigger selected on channel 1 .

Channel 4 controls the speed of effect wheel rotation, allowing you to vary the speed on controllers without cross-faders. If your controller has cross-faders, and you use them, then set channel 4 to the "tracking" speed ( 0 percent).

## BASIC SERVICE

The CX-2 requires simple routine maintenance. The maintenance schedule depends heavily on the operating environment; please consult a Martin service technician for recommendations.

Any service procedure not described here should be referred to a qualified technician.

## Important! Excessive dust, grease, and smoke fluid buildup degrades performance and causes overheating and damage to the fixture that is not covered by the warranty. <br> Warning! Disconnect the fixture from AC power before removing any cover.

## CLEANING

## To clean optical components

Use care when cleaning optical components. The surface of the color filters is fragile and small scratches may be visible.

1 Disconnect the fixture from AC power and allow the components to cool completely.

2 Release the 4 cover locks by turning them a quarter-turn counterclockwise. Lift the cover straight off.

3 Blow or vacuum away loose dust. Remove residues from lenses and filters with a soft cloth or cotton swabs wetted with isopropyl alcohol. Regular glass cleaner may also be used, but no residues may remain.

4 Rinse with distilled water. Mixing the water with a small amount of wetting agent such as Kodak Photoflo will help prevent streaking and spotting.

5 Dry with a clean, soft and lint-free cloth or blow dry with compressed air.
6 Replace the top cover. To lock the 4 cover locks, turn them a quarter to a half turn clockwise, until you feel them click. Do not overtighten.

To clean the fan and air vents
To maintain adequate cooling, dust must be cleaned from the fan and air vents periodically.

1 Remove the data and power cables and stand the fixture on end.
2 Remove dust and dirt from the fan blades and vent grills using a soft brush, cotton swab, vacuum, or compressed air.

## REPLACING FUSES

The CX-2 has 2 fuses. The main fuse holder is built in to the mains input socket. The secondary fuse is located on the printed circuit board.

Warning! Never replace fuses with ones of a different rating!

## To replace the main fuse

1 Unplug the mains cable from the input socket. Pry open the fuse holder and remove the fuse.

2 Replace the fuse with one of the same type. The fuse rating is listed on serial number label.

## To replace the secondary fuse

1 Disconnect the fixture from AC power. Release the 4 cover locks by turning them a quarter-turn counterclockwise. Lift the cover straight off.

2 The fuse is located right behind the data input connector. Pry out the defective fuse and replace it with one of the same rating.

3 Replace the cover before applying power.

## Troubleshooting

| Problem | Probable cause(s) | Remedy |
| :---: | :---: | :---: |
| One or more of the fixtures is completely dead. | No power to fixture. | Check that power is switched on and cables are plugged in. |
|  | Primary fuse blown. | Replace fuse. |
|  | Secondary fuse blown. | Replace fuse. |
| Fixtures reset correctly but all respond erratically or not at all to the controller. | The controller is not connected. | Connect controller. |
|  | XLR pin-out of the controller does not match pin-out of the first fixture on the link (i.e. signal is reversed). | Install a phase-reversing cable between the controller and the first fixture on the link. |
| Fixtures reset correctly but some respond erratically or not at all to the controller. | Bad data link connection | Inspect connections and cables. Correct poor connections. Repair or replace damaged cables. |
|  | Data link not terminated with $120 \Omega$ termination plug. | Insert termination plug in output jack of the last fixture on the link. |
|  | Incorrect addressing of the fixtures. | Check DIP-switch settings. |
|  | One of the fixtures is transmitting as a master or is defective. | Bypass one fixture at a time until normal operation is regained: unplug both connectors and connect them directly together. Have the defective fixture serviced by a qualified technician. |
| An effect fails to reset correctly. | The effect requires mechanical adjustment. | Contact Martin technician for service. |
| No light. | Lamp missing or blown | Disconnect fixture and replace lamp. |
| Lamp cuts out intermittently or burns out too quickly. | Fixture is too hot. | Allow fixture to cool. |
|  | The transformer setting does not match local AC voltage. | Check AC setting. |
